JM.Lauritsen May 16th. **"Feasibility Preview"** of an attempt to add a type of analysis to epidata.

Not for general dissemination.

Selected screen plots from testing of possibility of adding the 10-12 most used commands from analysis.exe to EpiData.

After some days of programming a feasibility preview of "basic analysis" in EpiData can be made. The purpose of this is to ensure that with proper time etc. we could actually make this work. It should be noted that the hard part remains. What you can see below is far from final development. Just in making what you see here made the program break down etc. It is a first trial.

There could be a "menu oriented" input like this.

e.g. for mean output could be:

JM.Lauritsen May 16th. **"Feasibility Preview"** of an attempt to add a type of analysis to epidata.

Not for general dissemination.

A more EpiInfo v6 alike command prompt could be like this with a command prompt, a program lines review to the right and the output above :

Please do not comment on precise look since this is just a "quick test" with no refinement or design formulations or quality assurance.
